# Coming webinars

May 8th

## Interdental cleaning from a scientific and clinical perspective

Michaela von Geijer DDS

**Michaela von Geijer**  
Specialist Odontology

The lecture will focus on the existing evidence supporting the benefit and importance of interdental cleaning and plaque control. There will be presented a review of the research on interdental cleaning, particularly focusing on the evidence that highlights the use of interdental brushes.

June 5th

## Breaking Bad - Habits ... healthy habit formation in dental practice:

Elaine Tilling MSc RDH DMS MIHPE

**Elaine Tilling**  
MSc RDH DMS MIHPE

This fully interactive presentation will explore current knowledge of the complexity of habit formation. Models of healthy habit development used in health care will be discussed with

a view to their practical application in dental practice

Sept 4th

## Special Patients, Special Carers ?

Judy Caesley RDH

**Judy Caesley**  
RDH

Clinical knowledge and observation of disability and associated medical conditions can form the basis of the oral care advice that we provide in general practice. This presentation will provide an overview of a range of health issues that can impact upon a patients ability to maintain a healthy mouth and question some of the expectations that we may have about patients with challenging health problems.

Nov 6th

## Healthy Implants – The importance of maintenance and good plaque control

Michaela von Geijer DDS

**Michaela von Geijer**  
Specialist Odontology

The prevalence of peri-implant diseases seems to be growing. As there are no established and predictable concepts for the treatment of peri-implantitis, primary prevention is of key importance. Patients who are rehabilitated with dental implants need to be given proper oral hygiene instructions and the prosthetic constructions need to allow accessibility for oral hygiene around implants. Peri-implant maintenance is of uttermost importance for success.
